

NEUROSCIENCE, NUMERACY, and Meaningful Math Instruction

Struggling learners don't need more practice—they need the right approach.

Join us at the NILD Canada Annual Conference featuring keynote speaker Dr. Daniel Ansari, a leading researcher in mathematical cognition, as we explore the connection between early numeracy, math anxiety, and dyscalculia, and what it means for today's classrooms.

Grounded in current research and real-world application, this conference will help you better understand how math learning develops, why some students struggle, and how to identify challenges earlier—before they become harder to address.

You'll leave with practical insight to help you reduce student anxiety, strengthen foundational skills, and support learners in building confidence and competence in math.

NILD CANADA ANNUAL CONFERENCE
